## Professional Experience

**Bank.Green** *April 2026 - Present*

*Data Scientist*

- Ingested user data via GraphQL API and cleaned and transformed datasets using Python (Pandas, NumPy), increasing usable data volume by 200% and unblocking downstream analytics pipelines
- Validated data quality post-transformation and developed Bokeh dashboards to visualize real-time survey response data (GraphQL → Python → Bokeh), reducing reporting costs to $0

**Boundary Remote Subsurface Solutions** *Sept. 2024 - April 2026*

*Data Visualization Developer*

- Architected cloud-based data infrastructure on AWS (S3, Glue ETL, RDS), deploying 70+ geospatial datasets and owning the full pipeline from raw ingestion through ETL transformation to structured, query-ready output
- Developed 3D geospatial visualizations of 4 subsurface Earth layers using Python, translating complex geological datasets into actionable insights for research teams

**Pacific Life** *June 2023 - Sept. 2023*

*Data Analytics Intern - Marketing Analytics*

- Filtered and queried large-scale datasets in Snowflake, building a data pipeline processing 13M+ rows across 10 marketing channels with SQL-based transformations to produce clean, analysis-ready datasets
- Performed feature selection across marketing variables (reach, cost, quality) to identify key drivers of campaign performance, delivering findings to marketing, Salesforce, and non-technical audiences at an internal expo
- Automated campaign projection by developing a Tableau lead generation model on 2M rows of segmented data, eliminating a previously manual reporting process

## Projects

**Response Prediction Model for Bridge Structures** *Jan. 2024 - June 2024*

*Machine Learning*

- Engineered features across 8 structural variables using Random Forest Classifier for feature selection, performing data preparation and EDA generating 44 visualizations across 24 predictive relationships using Python (Pandas, Matplotlib, Seaborn)
- Trained and evaluated 4 machine learning models (Scikit-learn) to predict bridge collapse risk, achieving 99% classification accuracy and RMSE of 0.6 on held-out test data

## Education

**University of California, Irvine** Irvine, California

*Bachelor of Science in Data Science*

- **Relevant Coursework:** Python Programming, Database Management Systems, Statistics, Machine Learning
- **Awards**: UCI ICS Project Expo: 1st Place in Data Science - Response Prediction Model for Bridge Structures, Dean's List 5x

## Technical Skills

**Programming Languages:** Python, SQL, R, Excel VBA
**Cloud & Data Infrastructure:** AWS (S3, Glue ETL, RDS), Snowflake
**Data Engineering & ETL/ELT:** End-to-end pipeline design — AWS (S3 → Glue ETL → RDS), GraphQL API ingestion, event-driven workflows; SQL-based transformations
**ML & Analytics Frameworks:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Bokeh
**Tools & Platforms:** Git, Tableau, Jupyter Notebook, Visual Studio Code, Anaconda
